Security recommendations 0
Root user has MFA
Having multi-factor authentication (MFA) for the root user improves security for this account.
Root user has no active access keys
Using access keys attached to an IAM user instead of the root user improves security.

User details
User name
The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)
Provide user access to the AWS Management Console - optional
In addition to console access, users with SignInLocalDevelopmentAccess permissions can use the same console credentials for programmatic access without the need for access keys.
If you are creating programmatic access through access keys or service-specific credentials for AWS CodeCommit or Amazon Keyspaces, you can generate them after you create this IAM user. Learn more

Set permissions
Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. Learn more
Permissions options
Add user to group
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.
Copy permissions
Copy all group memberships, attached managed policies, and inline policies from an existing user.
Attach policies directly
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.
Permissions policies (1/1599)
Choose one or more policies to attach to your new user.

Billing and Cost Management
We're preparing your cost and usage data. This process can take up to 24 hours after you first visit the Billing and Cost Management console. In the meantime, you can view bills, make payments, and manage your preferences and settings. Once your data is ready, you can view cost breakdowns, forecasted costs, savings opportunities, and more on this page. To learn more about AWS Cloud Financial Management, visit the Getting started page.

AWS Budgets
Set custom budgets that alert you when you exceed your budgeted thresholds
AWS Budgets is your hub for creating, tracking, and inspecting your budgets.
Start tracking your AWS costs and usage
Once you have a budget created, AWS Budgets allows you to create budgets, forecast spend, and take action on your costs and usage from a single location.
Create a budget
Pricing (US)
There is no additional charge for using AWS Budgets. You only pay for configured actions that go beyond the free tier offer of 62 action-enabled budget days.

Choose budget type Info
Budget setup
Use a template (simplified)
Use the recommended configurations. You can change some configuration options after the budget is created.
Customize (advanced)
Customize a budget to set parameters specific to your use case. You can customize the time period, the start month, and specific accounts.
Billing View - optional
Select a billing view you want to create this data export for. This will not be editable after create. If no view is selected, this export will be created for your account data (primary view).
Templates - new
Choose a template that best matches your use case.
Zero spend budget
Create a budget that notifies you once your spending exceeds $0.01.
Monthly cost budget
Create a monthly budget that notifies you if you exceed, or are forecasted to exceed, the budget amount.
Daily Savings Plans coverage budget
Create a coverage budget for your Savings Plans that notifies you when you fall below the defined target.
Daily reservation utilization budget
Create a utilization budget for your reservations that notifies you when you fall below the defined target.
Zero spend budget - Template
Budget name
Provide a descriptive name for this budget.
My Zero-Spend Budget
Names must be between 1-100 characters.

Why create budget alerts?
In order to be notified on the state of your budget, you can create up to 5 different alerts based on your budgeted amount. For example, create an alert to notify you when you have reached 75% of your budgeted amount.
How to get started?
Start by defining alert thresholds, then specify alert recipients and how you would like them to be notified. Alerts can be sent via email, AWS SNS, and AWS Chatbot.
Budget amount
Your budgeted amount: $0.01
To change your budgeted amount, go back to step 2.
New email recipients must verify their address
AWS sends a verification email to each new recipient you add. New recipients who do not verify their address will not receive budget alerts. You can check verification status and resend verification emails from the budget details page.
Alert #1
Remove
Set alert threshold
Threshold
When should this alert be triggered?
80
% of budgeted amount
Trigger
How should this alert be triggered?
Actual
